QA Test Engineer with two years of production QA in Windows environments, manual and exploratory, plus test automation designed and maintained on my own shipped products across web and mobile. I document defects with reproduction steps and system state, verify fixes, and sign off releases. Based in Cyprus, so a Nicosia hybrid schedule works without relocation.

Core Competencies

- **Manual QA Process:** defect documentation with reproduction steps and system state that developers act on without follow-up questions, fix verification, release sign-off, manual and exploratory testing across ongoing releases.
- **Test Design & Automation:** test case design and maintenance of end to end suites (Playwright), API test automation, unit and integration testing, CI/CD test pipelines that run on every deploy.
- **API Testing:** code-based API test automation against REST endpoints, auth, and payments on shipped products, running in CI on every deploy.
- **Web & Mobile Platforms:** quality ownership across a web platform (React, Node, Express, MongoDB) and a mobile app (Expo / React Native), from test design through post-release monitoring with Sentry crash reporting.
- **Tooling:** TypeScript, JavaScript, Python; Git/GitHub, GitHub Actions, Sentry; Claude Code in daily agentic workflow.

Professional Experience

- **Nexcom Technologies** **Cyprus**
QA Engineer 2022 - 2024
 - Ran manual and exploratory production QA in Windows environments across ongoing releases.
 - Wrote defect reports with reproduction steps and system state that developers could act on without follow-up questions.
 - Verified fixes and performed release sign-off before each release shipped.

Independent Shipped Products (Test Automation Since 2024)

- **Receipt price-intelligence mobile app** github.com/leosoltan47/Is-This-Worth-It
Is This Worth It 2024 - Present
 - Built and shipped with Expo (React Native), Convex backend, Gemini API, and Google Vision OCR.
 - Playwright and API test automation in CI/CD pipelines; Sentry crash reporting closes the loop on defects that reach users after release.

- **Exam prep platform**
Kamu Sinav KKTC 2024 - Present
 - React frontend with Node, Express, and MongoDB backend; JWT auth, payment integration, and a deterministic exam engine.
 - 57 server-side tests plus a Playwright end to end suite that runs on every deploy.

Education

- **University of Kyrenia** **Kyrenia, Cyprus**
B.Sc. in Software Engineering 2022 - 2027 (expected)
Degree in progress, expected 2027.

Languages

- English, Turkish, Russian (professional working proficiency).
