Dear Emerald Zebra team,

Following our current thread, I would like to be considered for the QA Test Engineer (Mid Level) role in Nicosia. The core of the role is manual quality assessment across web and mobile: designing test cases, documenting defects, verifying with developers, and testing after release. That maps directly onto how I have worked for the last four years, first as a QA engineer inside a company, then as the sole owner of quality on products I ship myself.

What I would bring to the client's team:

- Production QA discipline: two years at Nexcom Technologies doing manual and exploratory testing in Windows environments, writing defect reports with reproduction steps and system state, verifying fixes, and signing off releases.
- Web and mobile coverage: since 2024 I own quality end to end on two shipped products, a web exam platform and a React Native mobile app, with Playwright end to end suites and API test automation running on every deploy and Sentry watching what escapes, which gives me concrete post-release quality metrics to work from.
- API testing: my API testing is code-based in CI rather than through clients like Postman or SoapUI; the concepts carry over directly and the tools are a short step from where I work daily.

Two requirements I want to name plainly rather than let you find them later. My degree is in progress, expected 2027, not completed. And my working languages are English, Turkish, and Russian; I do not speak Greek. You will know better than I how firm the client's Greek requirement is, and I raise it now so it costs no one an interview round. Against the 3 to 5 years asked, I offer two years of production QA plus two further years where the test design, the automation, and the release call were mine alone.

In a first release cycle with the client I would start where my record is strongest: reproduce and document the open defect backlog to the standard my Nexcom reports set, verify fixes with the developers, and extend test cases where post-release escapes cluster.

I have attached a short automated QA audit I ran against emeraldzebra.cy with Playwright, as a working sample of how I scope a pass, verify findings, and write them up.

I look forward to hearing from you.

Kind regards,

Alex Soltan
