Dear Mr. Pitman,

I would like to be considered for the QA Engineer position in Paphos, job reference 11210. Your client is looking for someone who works across both manual and automated testing through the full SDLC, from test design to sign-off for production releases. That is exactly how I have worked for the last four years, first as a QA engineer inside a company, then as the sole owner of quality on products I ship myself.

What I would bring to the client's team:

- Production QA discipline: two years at Nexcom Technologies doing manual and exploratory production QA in Windows environments across ongoing releases, writing defect reports with reproduction steps and system state, verifying fixes, and signing off releases.
- Test automation the posting names as an advantage: since 2024 I own quality end to end on two shipped products, a web exam platform and a React Native mobile app, with Playwright end to end suites and API test automation running on every deploy, plus Sentry crash reporting on the mobile app watching what escapes after release.
- Process ownership: on my own products the test strategy, the automated frameworks, and the release call are mine, so embedding quality across the development lifecycle is not an aspiration in my case, it is the job I already do.

A few facts I want on the table before your client asks. My B.Sc. in Software Engineering is in progress, expected 2027, not completed. Against the 3+ years asked, I offer two years of production QA at Nexcom plus two further years where the test design, the automation, and the release decision were mine alone. And my defect tracking runs through GitHub rather than Jira, and my API testing is code-based in CI rather than through Postman; in both cases the underlying lifecycle and concepts are the same and the tool is a short step. I have not worked in ad tech, so RTB and SSP/DSP integrations would be new domain material; I would approach them the way I approached payments and OCR pipelines on my own products, by learning the data flow and testing the revenue paths first. You will know better than I how the client weighs each of these, and I raise them now so the call is made with the full picture.

I work in English daily; Turkish and Russian are additional working languages, which the posting lists as an advantage. I am based in Cyprus, so taking up the Paphos role does not require an international move.

I look forward to hearing from you.

Kind regards,

Alex Soltan
