[LinkedIn](#), [GitHub](#), leosoltan47.github.io/cv | EU (Romanian) passport, no work permit needed in the EU

Quality Assurance Engineer with two years of production QA and, since 2024, hands-on UI test automation built on my own shipped products: Playwright end to end suites covering the critical user flows of a web platform and a mobile app, API test automation, and CI/CD test pipelines that gate every deploy. I use AI tooling (Claude Code, daily) to accelerate test creation and maintenance, with every generated test reviewed and validated before it enters the suite. Based in Kyrenia, Cyprus, available for hybrid work in Nicosia.

Core Competencies

- **UI / Browser Test Automation:** Playwright end to end suites built and maintained on shipped web platforms, running on every deploy as the regression gate; test design around the platform's user flows; failure triage as the suites grow. (Cypress and Selenium are not my daily tools; the concepts transfer directly from Playwright.)
- **AI-Assisted Testing:** Claude Code in daily use to generate test cases, extend coverage, and debug failures, with every AI-generated test reviewed and validated before merge; LLM APIs (Gemini, Google Vision OCR) integrated and tested in production, so testing AI-dependent behaviour and its edge cases is familiar ground.
- **API Testing & Automation:** code-based API test automation running in CI, plus unit and integration testing; REST APIs built and tested on my own Node and Express backends. (Postman is not my daily tool; my API testing lives in code and CI.)
- **QA Process:** defect reports with reproduction steps and system state, tracked from discovery to resolution; triage, fix verification, and release sign-off; manual and exploratory testing where automation is not the right tool.
- **CI/CD & Tooling:** test pipelines in GitHub Actions gating deploys; Git version control; Sentry monitoring of defects that escape to production.
- **Programming & Data:** TypeScript, JavaScript, Python; SQL with PostgreSQL, plus MongoDB, Convex, and Redis; full web stack from React frontends to Node and Express APIs.

Professional Experience

- **Nexcom Technologies** **Cyprus**
QA Engineer 2022 - 2024
 - Ran production QA in Windows environments across ongoing releases, from defect intake through release sign-off.
 - Wrote defect reports with reproduction steps and system state that developers could act on without follow-up questions.
 - Verified fixes and performed release sign-off before each release shipped.
 - Ran manual and exploratory testing passes across releases, maintaining coverage where automation did not reach.

Independent Shipped Products (Test Automation Since 2024)

- **Exam prep platform (web)** 2024 - Present
Kamu Sinav KKTC
 - React frontend with Node, Express, and MongoDB backend; JWT auth, payment integration, and a deterministic exam engine.
 - 57 server-side tests plus a Playwright end to end suite that runs on every deploy as the regression gate for each release.

- **Receipt price-intelligence mobile app** github.com/leosoltan47/Is-This-Worth-It
Is This Worth It 2024 - Present
 - Built and shipped with Expo (React Native), Convex backend, Gemini API, and Google Vision OCR for receipt parsing.
 - Playwright and API test automation in CI/CD pipelines; Sentry crash reporting closes the loop on defects that reach users after release.

Education

- **University of Kyrenia** **Kyrenia, Cyprus**
B.Sc. in Software Engineering 2022 - 2027 (expected)
Degree in progress; studies are compatible with full-time work.

Languages

- English, Turkish, Russian (professional working proficiency).
