Dear Ms. Aristodemou,

I would like to be considered for the Quality Assurance Engineer vacancy in Nicosia, reference 9154. Your client wants someone who owns end to end UI testing for a data-heavy platform and who actively uses AI tools to accelerate test creation and maintenance. Both halves of that describe how I already work: Playwright UI suites are the backbone of my testing on two shipped products, and Claude Code is in my hands daily to generate test cases and extend coverage, with every generated test reviewed before it enters the suite.

What I would bring to the client's team:

- UI/browser test automation: since 2024 I have built and maintained Playwright end to end suites for a web exam platform and a React Native mobile app, running on every deploy as the regression gate, with failure triage as the suites grow.
- AI-assisted testing: the posting's AI requirements are my normal workflow, not a stretch goal. I use Claude Code for test generation, coverage, and debugging, and I have shipped and tested LLM-dependent features in production (Gemini API, Google Vision OCR), where anomalous output and messy real-world data are the default test conditions.
- QA process discipline: two years of production QA at Nexcom Technologies, writing defect reports with reproduction steps and system state, verifying fixes, and signing off releases. Clear defect tracking and reporting, which the posting asks the engineer to implement, is the part of QA I was trained in first.

A few facts I want on the table before your client asks. My B.Sc. in Software Engineering is in progress, expected 2027, and I am an entry to junior level candidate growing into this role, not a mid level hire. My SQL runs through PostgreSQL; ClickHouse would be new. I have not yet tested data-intensive systems at the scale the posting describes, and load testing tools such as k6, JMeter, or Locust are not in my toolkit yet; performance testing is the clearest gap and the one I would close first. You know your client's flexibility on each of these better than I do, and I raise them now so the call is made with the full picture.

I am based in Kyrenia, so the hybrid Nicosia arrangement works without relocation, and I hold an EU (Romanian) passport. English is my daily working language; Turkish and Russian are additional. If this vacancy is not the right match, I would be glad to be considered for other QA roles across your clients.

I look forward to hearing from you.

Kind regards,

Alex Soltan
