Junior full stack engineer, Cyprus based, already building the modern way: Claude Code and Codex run daily in my engineering workflow, with automated tests gating every deploy so generated code gets reviewed and verified, never just accepted. Front ends in React with TypeScript, back-end services and REST APIs in Node and Express, databases behind them. Two years of production QA at Nexcom Technologies came first, so testing, debugging and documentation are habits rather than aspirations. B.Sc. Software Engineering in progress, expected 2027, alongside two shipped products as equivalent practical experience.

Core Competencies

- **AI-assisted development:** Claude Code and Codex daily as a core part of the workflow, not an afterthought. Generated code is reviewed, tested and gated by CI before it ships; 57 server-side tests and a Playwright end to end suite run on every deploy of my exam platform.
- **Front end:** HTML, CSS and responsive design; JavaScript and TypeScript; React, React Native and Next.js. My framework depth is React; Vue is not in my toolkit yet.
- **Back end and APIs:** Node.js and Express services, REST API design, how front end and back end communicate, JWT authentication, payment integration. No .NET or C# yet; my service work is Node.
- **Databases and SQL:** PostgreSQL for relational work with SQL, MongoDB and Convex in shipped products, Redis in my wider toolset.
- **Programming foundations:** TypeScript, JavaScript and Python in daily use; B.Sc. Software Engineering coursework underway, applied in a deterministic exam engine that I built and tested.
- **Testing, debugging and documentation:** two years of production QA reproducing defects, isolating causes, documenting them with reproduction steps and system state, verifying fixes and signing releases off.
- **Version control and delivery:** Git and GitHub daily, GitHub Actions for CI/CD, releases tracked from change through deploy.

Independent Shipped Products

- **Exam prep platform, full stack**
Kamu Sinav KKTC 2024 - Present
 - React front end with a Node, Express and MongoDB back end; JWT authentication, payment integration and a deterministic exam engine.
 - Designed, developed, tested, deployed and maintained the whole web application, including the release process.
 - 57 server-side tests plus a Playwright end to end suite that runs on every deploy, gating AI-assisted changes.
- **Receipt price-intelligence mobile app** github.com/leosoltan47/Is-This-Worth-It
Is This Worth It 2024 - Present
 - Expo and React Native client on a Convex backend, with the Gemini API and Google Vision OCR integrated over REST to turn receipt photographs into structured data.
 - Playwright and API test automation in CI/CD pipelines; Sentry crash reporting; EAS builds and Netlify deploys.

Professional Experience

- **Nexcom Technologies** **Cyprus**
QA Engineer *2022 - 2024*
 - Two years of production QA in Windows environments across ongoing releases, working with developers on defects through to resolution.
 - Wrote defect reports with reproduction steps and system state that developers could act on without follow-up questions.
 - Verified fixes and performed release sign-off before each release shipped.

Education

- **University of Kyrenia** **Kyrenia, Cyprus**
B.Sc. in Software Engineering *2022 - 2027 (expected)*
Degree in progress, expected 2027. Coursework in software engineering, testing and web development.

Languages

- English, Turkish, Russian (professional working proficiency). English carries all my code, documentation and applications. I do not speak Greek.
