Dear Hiring Manager,

I am applying for the Junior Full Stack Engineer position at A.A. MIND YOUR GAP in Larnaca, reference number 01. Your posting describes an AI-native engineering team built on spec-driven development and AI-assisted tooling, and that is how I already work: Claude Code and Codex run daily in my engineering workflow, and every change they touch is reviewed by me and gated by automated tests before it ships. I want my first industry role in a team that builds this way.

What I would bring:

- AI-assisted development with critical review built in. On my exam platform, 57 server-side tests and a Playwright end to end suite run on every deploy. I already treat AI-generated code the way your posting asks: something to review and verify, not just accept.
- React and TypeScript front ends, Node back ends. Kamu Sinav KKTC is a React front end on a Node, Express and MongoDB back end with JWT authentication, payment integration and a deterministic exam engine. I designed it, built it, tested it, deployed it and run its releases.
- REST APIs end to end. On Is This Worth It I integrated the Gemini API and Google Vision OCR to turn receipt photographs into structured data, with Sentry, EAS builds and Netlify deploys in its delivery path.
- Debugging and documentation as trained habits. Two years of production QA at Nexcom Technologies: reproduce, isolate, document with reproduction steps and system state, verify the fix, sign the release off. Clean written communication with developers was the job.

Three gaps, stated plainly. My back-end work is Node rather than .NET; I have not used C# or ASP.NET Core, and I would lean on your structured training and mentorship to close that, the same way I picked up Convex and Expo from zero to shipped. My B.Sc. in Software Engineering is in progress, expected 2027; I bring two shipped products as the equivalent practical experience your posting allows for. And I have not yet worked sprint ceremonies in a team setting; my process discipline so far comes from running my own releases and from the QA side of a production release cycle.

I am based in Kyrenia and available for hybrid work in Larnaca, with an EU (Romanian) passport so no work permit is required. English carries all my code, documentation and technical writing; I also work in Turkish and Russian, though I do not speak Greek. I would welcome a conversation about starting as your next junior engineer.

Kind regards,

Alex Soltan
