[LinkedIn](#), [GitHub](#), leosoltan47.github.io/cv | EU (Romanian) passport, no work permit needed in the EU

Junior developer, Cyprus based. I plan, design, build, test and maintain complete web and mobile applications: HTML, CSS, JavaScript and TypeScript on the front end, Node and Express behind them, MongoDB or Convex underneath, with relational work in PostgreSQL in my wider toolset. What I ship is unit tested and runs through continuous integration on every deploy. Two years of production QA at Nexcom Technologies came first, so examining an existing system, finding its flaws and reporting them in a form someone can act on are habits rather than new skills. B.Sc. Software Engineering in progress, expected 2027.

Core Competencies

- **JavaScript, HTML and CSS:** daily working stack, with TypeScript on top; React, React Native and Next.js for component work.
- **Back end:** Node.js and Express, REST API design, JWT authentication, payment integration, a deterministic exam engine, third-party API and service integration (Gemini API, Google Vision OCR, payment provider); Python with Django in my wider toolset.
- **Databases:** relational work in PostgreSQL; MongoDB and Convex in shipped products; Redis in my wider toolset.
- **Full software development life cycle:** on my own products I carry each project from plan and design through build, test, release and monitoring, with Sentry crash reporting watching production.
- **Testing and continuous integration:** unit, integration and API tests, Playwright end to end suites, GitHub Actions pipelines that run on every deploy.
- **Examining existing systems:** two years of production QA reproducing defects, isolating causes, reporting them with system state, verifying the fix and signing the release off.
- **Source control and delivery:** Git and GitHub daily, GitHub Actions for CI, releases tracked from change through deploy. Claude Code in a daily agentic coding workflow.

Independent Shipped Products

- **Exam prep platform, full stack** 2024 - Present
Kamu Sinav KKTC
 - React front end with a Node, Express and MongoDB back end; JWT authentication, payment integration and a deterministic exam engine.
 - Designed, built, tested and maintained the whole application, including the release process.
 - 57 server-side tests plus a Playwright end to end suite that runs on every deploy.
- **Receipt price-intelligence mobile app** github.com/leosoltan47/Is-This-Worth-It
2024 - Present
Is This Worth It
 - Expo and React Native client on a Convex backend, with the Gemini API and Google Vision OCR integrated to turn receipt photographs into structured data.
 - Playwright and API test automation in CI/CD pipelines; Sentry crash reporting; EAS builds and Netlify deploys.

Professional Experience

- **Nexcom Technologies** Cyprus
2022 - 2024
QA Engineer
 - Two years of production QA in Windows environments across ongoing releases, working with developers on defects through to resolution.
 - Wrote defect reports with reproduction steps and system state that developers could act on without follow-up questions.
 - Verified fixes and performed release sign-off before each release shipped.

Education

- **University of Kyrenia** **Kyrenia, Cyprus**
B.Sc. in Software Engineering *2022 - 2027 (expected)*
Degree in progress, expected 2027. Coursework in software engineering, testing and web development.

Languages

- English, Turkish, Russian (professional working proficiency).
