Quality Assurance (QA) Engineer with two years of production QA in Windows environments plus test automation built and maintained on my own shipped products. I execute manual and automated test cases, document defects with reproduction steps and system state, verify fixes with developers, and own release sign-off, with attention to detail carried through the full Software Development Life Cycle (SDLC). Based in Cyprus, within easy reach of the Nicosia office.

Core Competencies

- **Manual Testing:** manual and exploratory testing across ongoing production releases; defect reports with reproduction steps and system state that developers act on without follow-up questions.
- **Automated Testing Tools:** Playwright end to end suites maintained in CI/CD pipelines that run on every deploy; unit and integration testing, 57 server-side tests on one shipped product; consistent test coverage across key functional and regression areas carried by the automated suites.
- **API Testing:** code-based API test automation against REST endpoints and auth on shipped products, including a backend with live payment integration, running in CI on every deploy.
- **QA Process & SDLC:** test cases designed and documented from the specification, with quality carried through to post-release monitoring (Sentry crash reporting); defect lifecycle tracked from report through verified fix on GitHub; fix verification and sign-off for production releases.
- **SQL, Scripting & Tooling:** SQL (PostgreSQL), MongoDB; Python scripting, TypeScript, JavaScript; Git/GitHub, GitHub Actions, Sentry; Claude Code in daily agentic workflow.

Professional Experience

- **Nexcom Technologies** **Cyprus**
QA Engineer 2022 - 2024
 - Ran manual and exploratory production QA in Windows environments across ongoing releases.
 - Wrote defect reports with reproduction steps and system state that developers could act on without follow-up questions.
 - Verified fixes and performed release sign-off before each release shipped.

Independent Shipped Products (Test Automation Since 2024)

- **Receipt price-intelligence mobile app** github.com/leosoltan47/Is-This-Worth-It
Is This Worth It 2024 - Present
 - Built and shipped with Expo (React Native), Convex backend, Gemini API, and Google Vision OCR.
 - Playwright and API test automation in CI/CD pipelines; Sentry crash reporting closes the loop on defects that reach users after release.

- **Exam prep platform**
Kamu Sinav KKTC *2024 - Present*
 - React frontend with Node, Express, and MongoDB backend; JWT auth, payment integration, and a deterministic exam engine.
 - 57 server-side tests plus a Playwright end to end suite that runs on every deploy.

Education

- **University of Kyrenia** **Kyrenia, Cyprus**
B.Sc. in Software Engineering *2022 - 2027 (expected)*
Degree in progress, expected 2027.

Languages

- English (strong written and verbal, working language for all code and documentation); Turkish and Russian (professional working proficiency).
