Dear Lorraine,

Thank you for sending through the Junior Programmer opening in Nicosia, ref 10927; I would like to be put forward. Your client wants a junior developer who builds software that is unit tested, code reviewed and continuously integrated, and who can carry a project through the full software development life cycle. That is how my own products are built, because since 2024 there has been no one else to do any part of it.

What I would bring to the client's team:

- Shipping evidence, not classroom exercises: two shipped products, designed, built, tested and maintained end to end. Kamu Sinav KKTC is an exam prep platform on React, Node, Express and MongoDB with JWT authentication, payment integration and a deterministic exam engine, covered by 57 server-side tests and a Playwright suite on every deploy. Is This Worth It is a receipt price-intelligence mobile app on Expo and Convex, with third-party services (Gemini API, Google Vision OCR) integrated.
- The full life cycle the posting describes: on both products I plan and execute every stage myself, from design through build, test and release to monitoring with Sentry, so continuous integration, production monitoring and structured defect resolution are routine.
- Very good JavaScript, HTML and CSS: my daily stack, with TypeScript on top; relational database work in PostgreSQL.
- An eye for existing systems: two years of production QA at Nexcom Technologies, finding flaws in running software, reporting them so developers could act, and signing releases off.

The gaps, plainly. My back end is Node, Express and Django, not the .NET/CORE the posting asks for; object-oriented principles, MVC-style separation and framework design patterns are daily practice in that code, but C# itself would be new. I pick up stacks quickly, with Claude Code in my daily workflow: Convex, Expo and the Gemini API were all new to me when I adopted them for Is This Worth It, which shipped. I do not speak Greek; I work in English daily, with Turkish and Russian as additional working languages. And my B.Sc. is in progress, expected 2027, with studies compatible with full-time work, two products maintained concurrently alongside them.

I am based in Cyprus, so Nicosia requires no international move. If this client is not the right match, I would be glad to be considered for similar junior roles, and this letter can go straight to the colleague handling ref 10927. I look forward to hearing from you.

Kind regards,

Alex Soltan
