
Alex Soltan

Full-Stack Software Engineer | Web, Mobile, Product Delivery

Kyrenia, Cyprus | EU passport holder | alexsoltan47@gmail.com | linkedin.com/in/alex-soltan-88534b287 | github.com/leosoltan47

PROFILE

Full stack developer. React, React Native, Next.js, TypeScript, Node.js, Python. Freelance since 2024: I design, build, test and deploy client web and mobile products myself, working Agile with CI/CD. Before that, two years of production QA at Nexcom. That background shows in how I ship: unit, integration and Playwright end-to-end tests plus API test automation on everything, before it goes out, not after. I build with AI in the loop: Gemini and Google Vision OCR in production, Claude Code and Codex in the daily workflow. Based in Cyprus with an EU passport. Remote employment or contract work.

CORE SKILLS

Frontend and mobile: React, Next.js, React Native, Expo, TypeScript, JavaScript, Tailwind CSS, responsive UI, product flows

Backend and data: Node.js, Express, Python, Django, Django REST Framework, REST API development, MongoDB, PostgreSQL, SQL, SQLite, Convex, Redis, Celery

Testing and reliability: Test automation with Playwright, end-to-end testing, unit and integration testing, API testing, manual and regression testing, release verification, debugging and root-cause analysis

AI and LLM: LLM integration (Gemini API), Google Vision OCR, AI-assisted development with Claude Code and Codex, prompt engineering, agentic AI workflows, human-in-the-loop review of AI-generated code

Cloud and delivery: Git, GitHub, Google Cloud Run, AWS S3, Netlify, Sentry, EAS Build, CI/CD (continuous integration and delivery), Agile workflow, DNS, SSL, CDN troubleshooting

EXPERIENCE

Freelance Full-Stack Software Engineer - Client Projects

Kyrenia, North Cyprus | 2024 - Present

- Build client products solo: frontend, REST APIs, authentication, role-based access, data models, background jobs, admin tools.
- Own scope and architecture with the client directly. No handoffs; if it breaks in production, that is mine too.
- Ship through CI/CD with Playwright end-to-end suites, unit and integration tests, API test automation and a manual regression pass on critical paths.
- Run production with Sentry and logs. Debug from the error down to the commit.
- Use Claude Code and Codex daily. AI output gets the same review, tests and verification as my own code.

Quality Assurance Engineer - Nexcom Technologies

2022 - 2024

- Tested production software across Windows environments, network configurations and deployment paths.
- Wrote defect reports engineers could act on without a follow-up call: repro steps, system state, expected vs actual, release impact.
- Sat in triage with the engineers, verified fixes and signed off rollouts across frontend and backend.

SELECTED PROJECTS

Kamu Sinav KKTC - Client Platform

Stack: React, Vite, Node.js, Express, MongoDB, JWT, Tailwind CSS

- Owns end-to-end delivery of an exam-preparation platform with role-based access, admin workflows, subscription flows, progress tracking, API integration, and automated server tests.

Is This Worth It - North Cyprus

Stack: React Native, Expo, Convex, TypeScript, Gemini, Google Vision OCR, Cloud Run

- Built a receipt-intelligence product combining OCR, structured extraction, backend orchestration, confidence scoring, and scheduled ingestion workflows.

[Live demo](#) | [Repository](#)

Newera

Stack: Next.js, React, TypeScript, Django, DRF, PostgreSQL

- Built a full-stack product covering content workflows, authentication, saved state, account flows, backend APIs, and database-backed user features.

Reel Scheduler

Stack: Expo, React Native, Django, AWS S3, Celery, Sentry

- Built a monitored media workflow with a mobile client, Django APIs, S3 storage, background workers, error monitoring, and deployment automation.

FULL-STACK DELIVERY

- Designs complete product slices across interfaces, APIs, data models, background processing, deployment, and operational checks.
- Turns ambiguous requirements into scoped work, ships incrementally, and verifies outcomes in the running product.

EDUCATION AND LANGUAGES

University of Kyrenia: B.Sc. Software Engineering | **Languages:** English, Turkish, Russian
