
Alex Soltan

QA Automation Engineer | Playwright, API and Product Quality

Kyrenia, Cyprus | EU passport holder | alexsoltan47@gmail.com | linkedin.com/in/alex-soltan-88534b287 | github.com/leosoltan47

PROFILE

QA automation engineer. Two years of production quality assurance at Nexcom Technologies, then test automation for my own freelance client products since 2024. Playwright end-to-end testing, API test automation, unit and integration tests, manual and exploratory work in Agile delivery. I read code, so a failure gets a root cause in the UI, the REST API, the SQL data or the CI/CD pipeline, not a screenshot and a shrug. I also test AI-era products: LLM features, AI-generated code and OCR pipelines all get verified before they ship. Based in Cyprus with an EU passport. Remote employment or contract work.

CORE SKILLS

Test automation: Playwright, end-to-end testing, browser automation, API test automation, integration testing, CLI-driven testing, regression suites, CI/CD test pipelines

Test design: Functional, regression, exploratory, smoke and release testing; test cases and test documentation, edge cases, negative paths, defect triage, bug reports, fix verification

Technical investigation: JavaScript, TypeScript, Python, REST APIs, SQL data validation, log analysis, browser DevTools, network and environment troubleshooting, root-cause analysis

AI and LLM testing: Verification of AI-generated code and tests, LLM feature testing (Gemini API), OCR pipeline edge cases, AI-assisted test design with Claude Code and Codex, prompt engineering

Engineering context: React, Next.js, React Native, Node.js, Express, Django, DRF, MongoDB, PostgreSQL, Convex, Redis, Git, GitHub, Sentry, Agile delivery, CI/CD

EXPERIENCE

Quality Assurance Engineer - Nexcom Technologies

2022 - 2024

- Tested production software across Windows environments, network configurations and deployment paths.
- Wrote defect reports engineers could act on without a follow-up call: repro steps, system state, expected vs actual, release impact.
- Sat in triage with the engineers, verified fixes and signed off rollouts across frontend and backend.

Freelance Software Engineer - Client Projects

Kyrenia, North Cyprus | 2024 - Present

- Write and maintain Playwright end-to-end suites, API test automation and regression coverage for client products in production.
- Cover the paths that actually break: auth, role-based access, admin and customer journeys, data persistence, error handling.
- Debug failures down to source: UI behaviour, API responses, logs, system state. A bug is closed when the fix is verified, not when it is filed.
- Build the same products as a full-stack dev, so findings often land as pull requests instead of tickets.

SELECTED PROJECTS

Kamu Sinav KKTC - Client Platform

Stack: React, Node.js, Express, MongoDB, JWT

- Tests role-based access, subscription flows, admin workflows, progress tracking, API integration, and server behavior using automated and manual checks.

Is This Worth It - North Cyprus

Stack: React Native, Expo, Convex, TypeScript, OCR, Gemini

- Tests receipt capture and structured extraction across uncertain OCR input, confidence scoring, API orchestration, failure paths, and mobile user flows.

[Live demo](#) | [Repository](#)

Newera

Stack: Next.js, Django REST Framework, PostgreSQL

- Validates authentication, account flows, saved state, content behavior, API contracts, database-backed features, and regression risk across frontend and backend changes.

Reel Scheduler

Stack: React Native, Django, AWS S3, Celery, Sentry

- Tests upload, storage, background-processing, error-monitoring, and deployment paths across mobile, API, worker, and cloud boundaries.

QA STRENGTHS

- Balances automation with exploratory judgment: automates stable critical paths and investigates ambiguous failures manually.
- Writes concise defect evidence that helps developers reproduce, prioritize, fix, and verify issues without unnecessary back-and-forth.

EDUCATION AND LANGUAGES

University of Kyrenia: B.Sc. Software Engineering | Languages: English, Turkish, Russian
